Business Pains

Underutilized spaces

Spaces in hots' facilities that are unused whereby it does not optimized the office space nor its costs

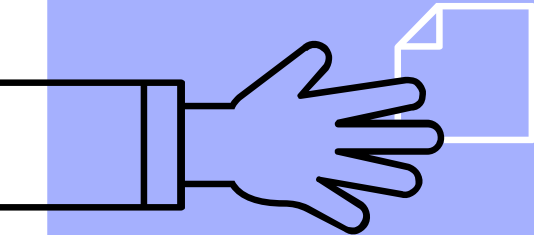

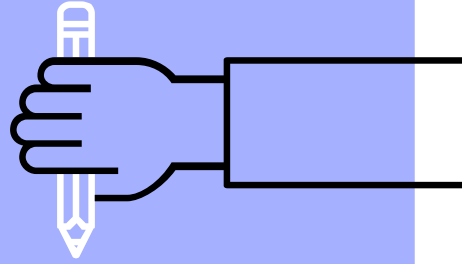

Financial Lock-in

Traditional lease system is a fixed costs that does not meet the flexible workspace need of individuals or businesses

The Idea

Project Description

“

The “Airbnb” for underutilized spaces

An online marketplace web-based platform system to match facilities providers with individuals and/or company who need space on-demand, ad hoc-basis

Features of the System

1

On-demand booking

Create and manage your facilities reservation conveniently real-time

3

Community Feedback and Review

Guests can post give their feedback and rating for each facilities visited

Location-based Posting

Visualize host location on Google Map

2

Smart Lock Facility Add-On

A QR code based smart door lock compatible with the platform

4

Benefits of the System

Flexibility

Deliver cost-effective space solutions whenever and wherever your business demands more flexibility.

Choice & Simplicity

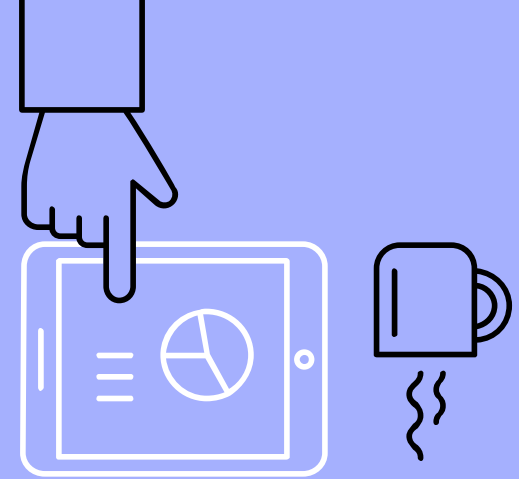

Access diverse and trusted network of space solutions at the click of a button.

Simplify the search process, transaction and management of spaces.

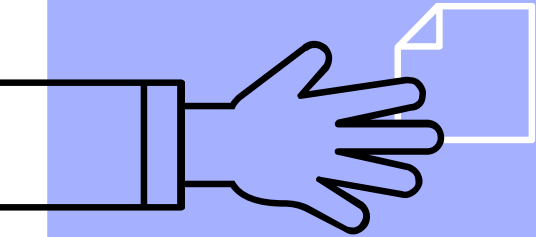

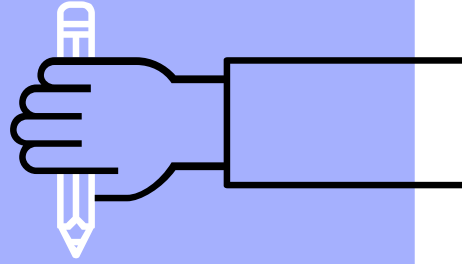

Sustainability

Reduce the waste of half empty spaces and time spent commuting.

Wireframes

Main Page:

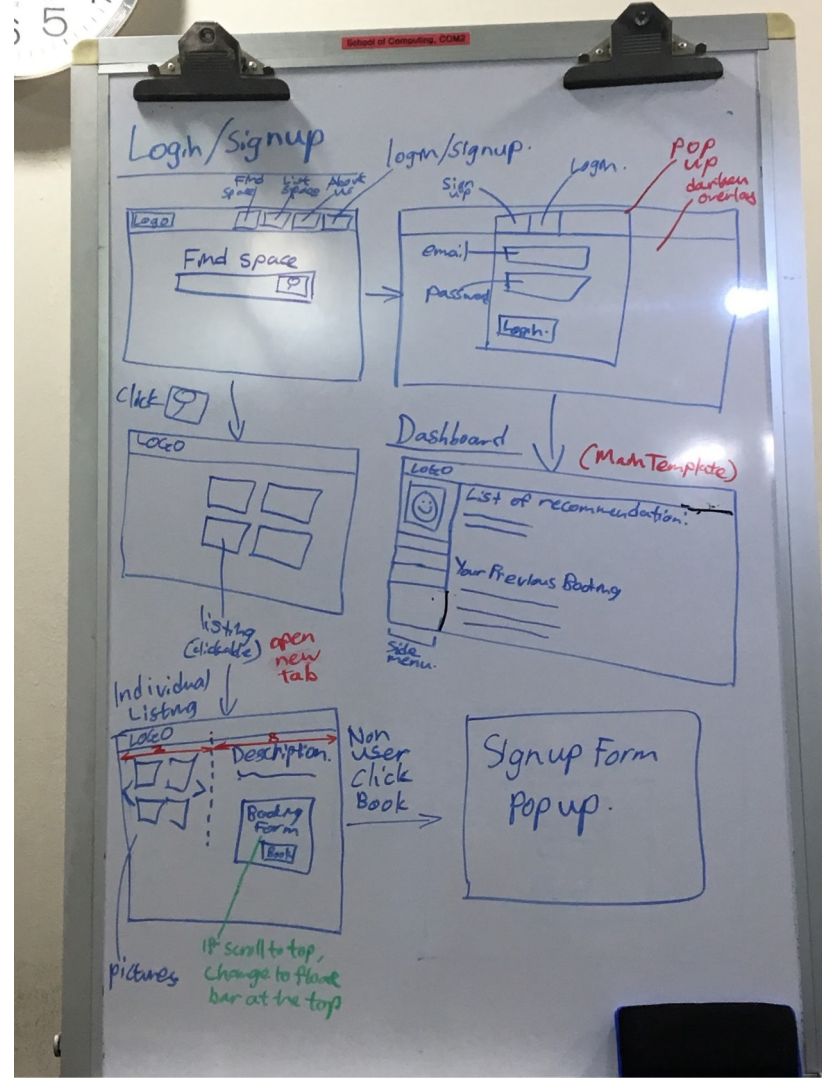

- Non-registered users can search for listing on main website
- They will be prompted to register an account with us when booking a room

Basic Access System:

- Login and/or sign up modal box using email and password

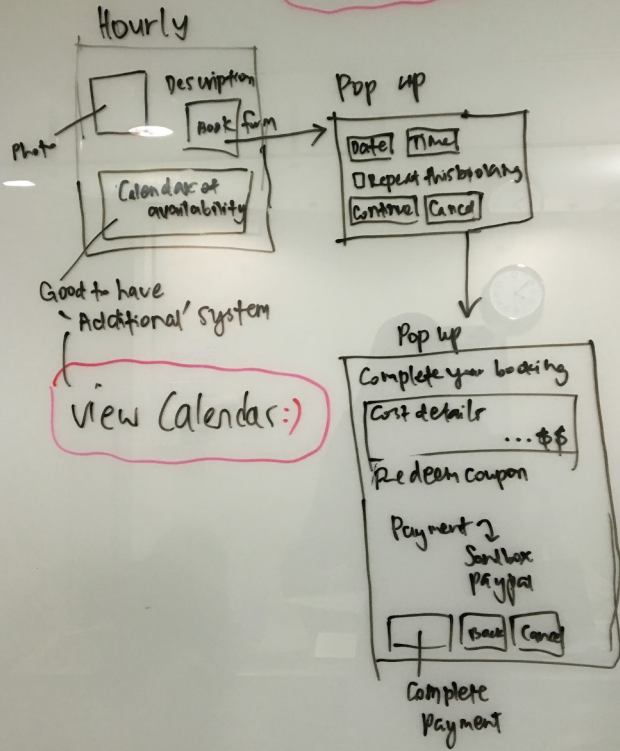

Individual Listing Page

- Each Listing page have its pictures and location presented on the google map

Consumers (Guest)

Book space

Timetable

- In listing, there is a timetable showing availability of venue

Booking Process

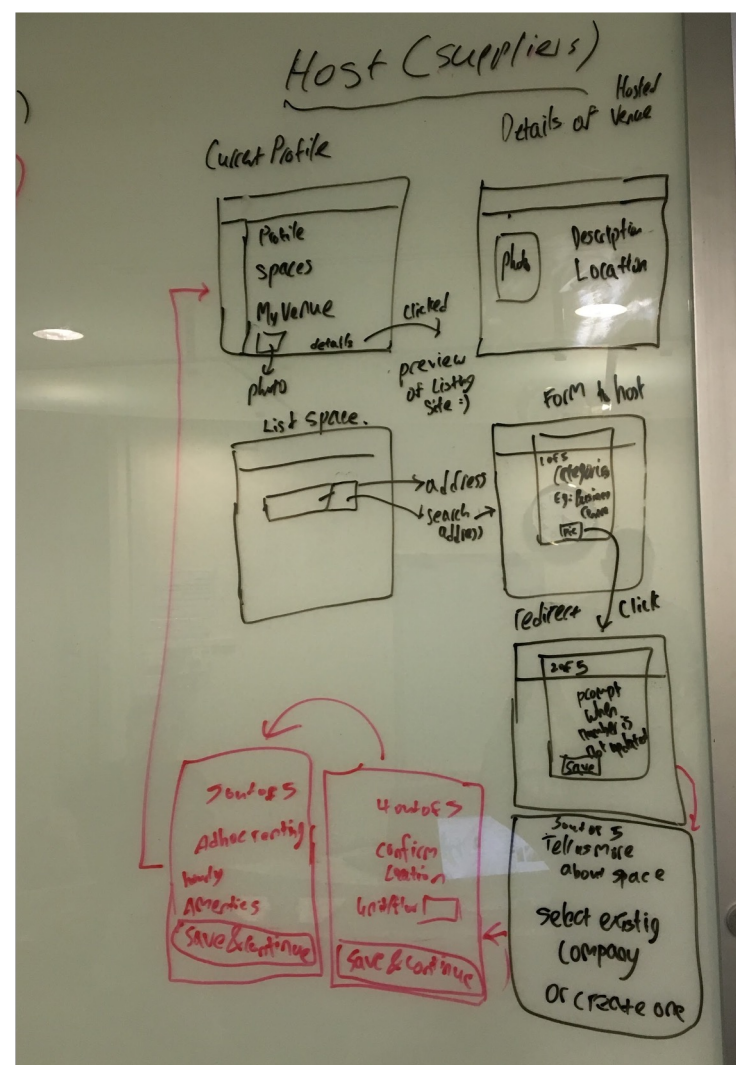

- Modal box form to handle the booking
- Leading to payment process of the deposit, handled by 3rd party like Paypal.

Posting of Listings:

- From hosts' dashboard
- Create a new listing via the form wizard where they enter the venue location.

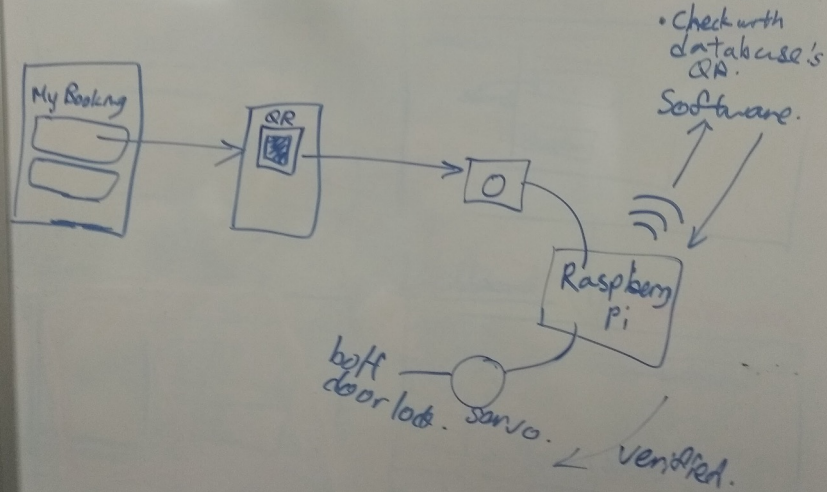

Managing Listings:

- Host can edit and manage their timetable of listing
- They can open up or block out the timeslots for their spaces

QR SMART Door System.

1 QR code ~ 1 booking

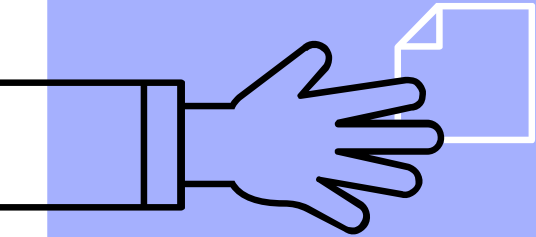

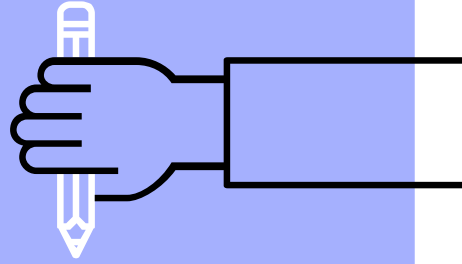

QR Code System

- Each booking has a unique QR code
- Guest scan the QR code to the reader to sign in
- The QR code is verified with the software and unlocks the door.
- Guest scan the QR code again to sign out and lock the door when they leave

Hardware-software communication

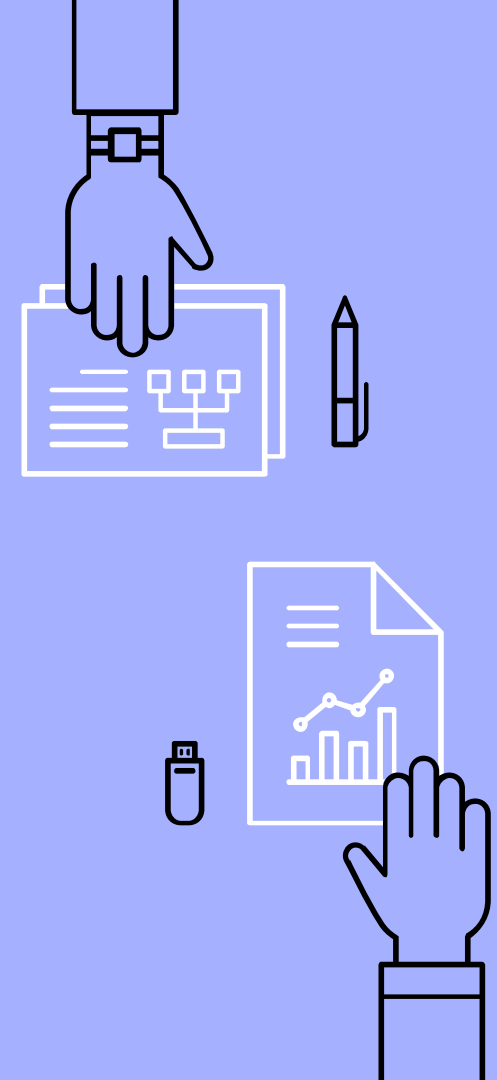

- Raspberry pi camera will capture QR code
- Then communicates wirelessly to server for QR code verification
- Then programs servo to lock/unlock door

Technology

Technology

- ▶ Software - Web-based application with mobile friendly interface
- ▶ Hardware - A Smart Door Lock with QR code sign-in and sign-out
- ▶ Deployment Environment:
 - Facilities whereby there is Internet connection

Hardware - SMART Door Lock

USB
Power
Supply

Raspberry Pi

Raspberry Pi
Camera

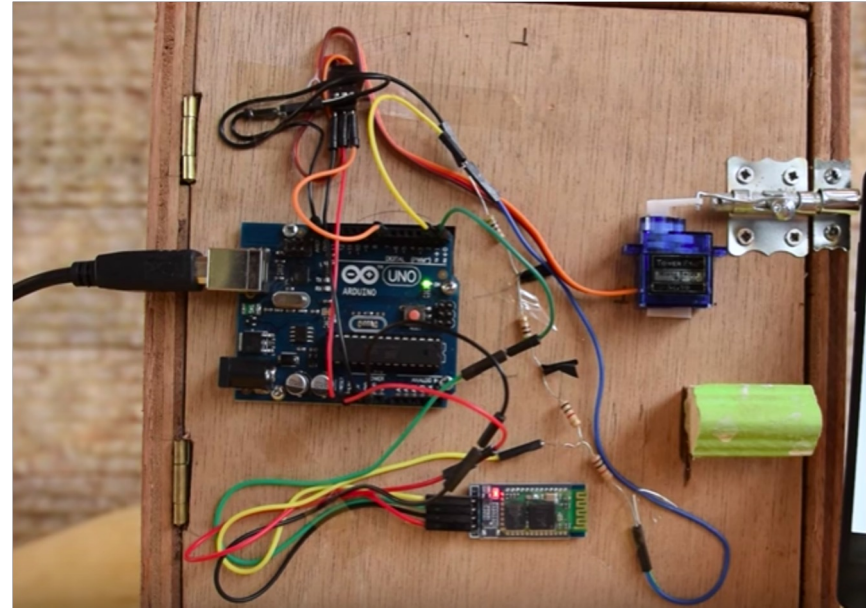

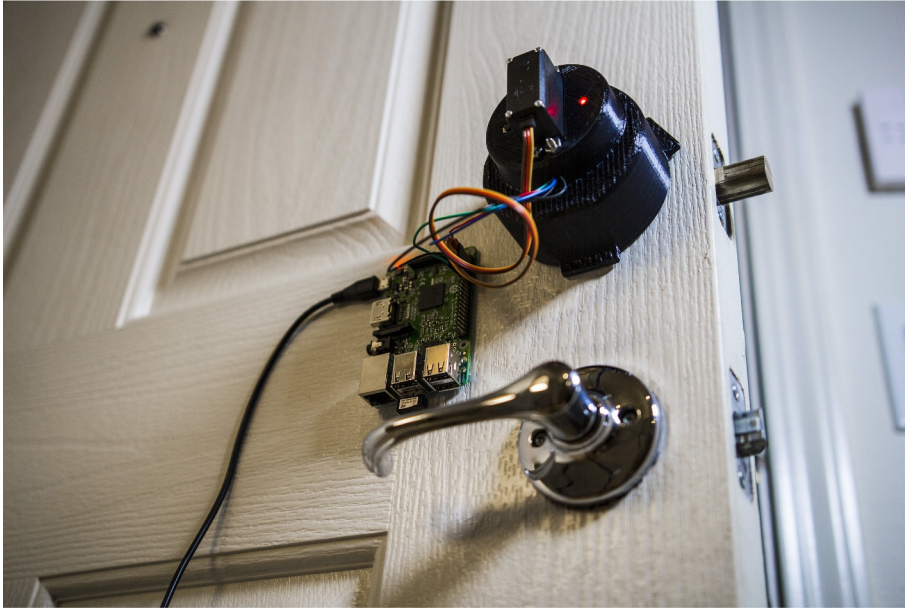

Servo

Barrel Door
Lock

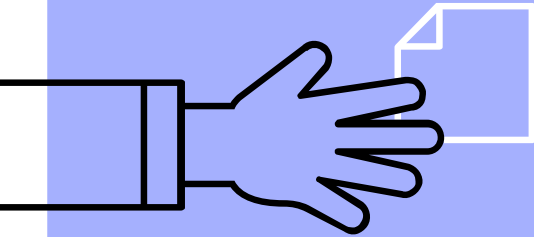

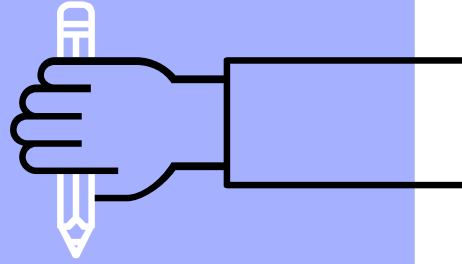

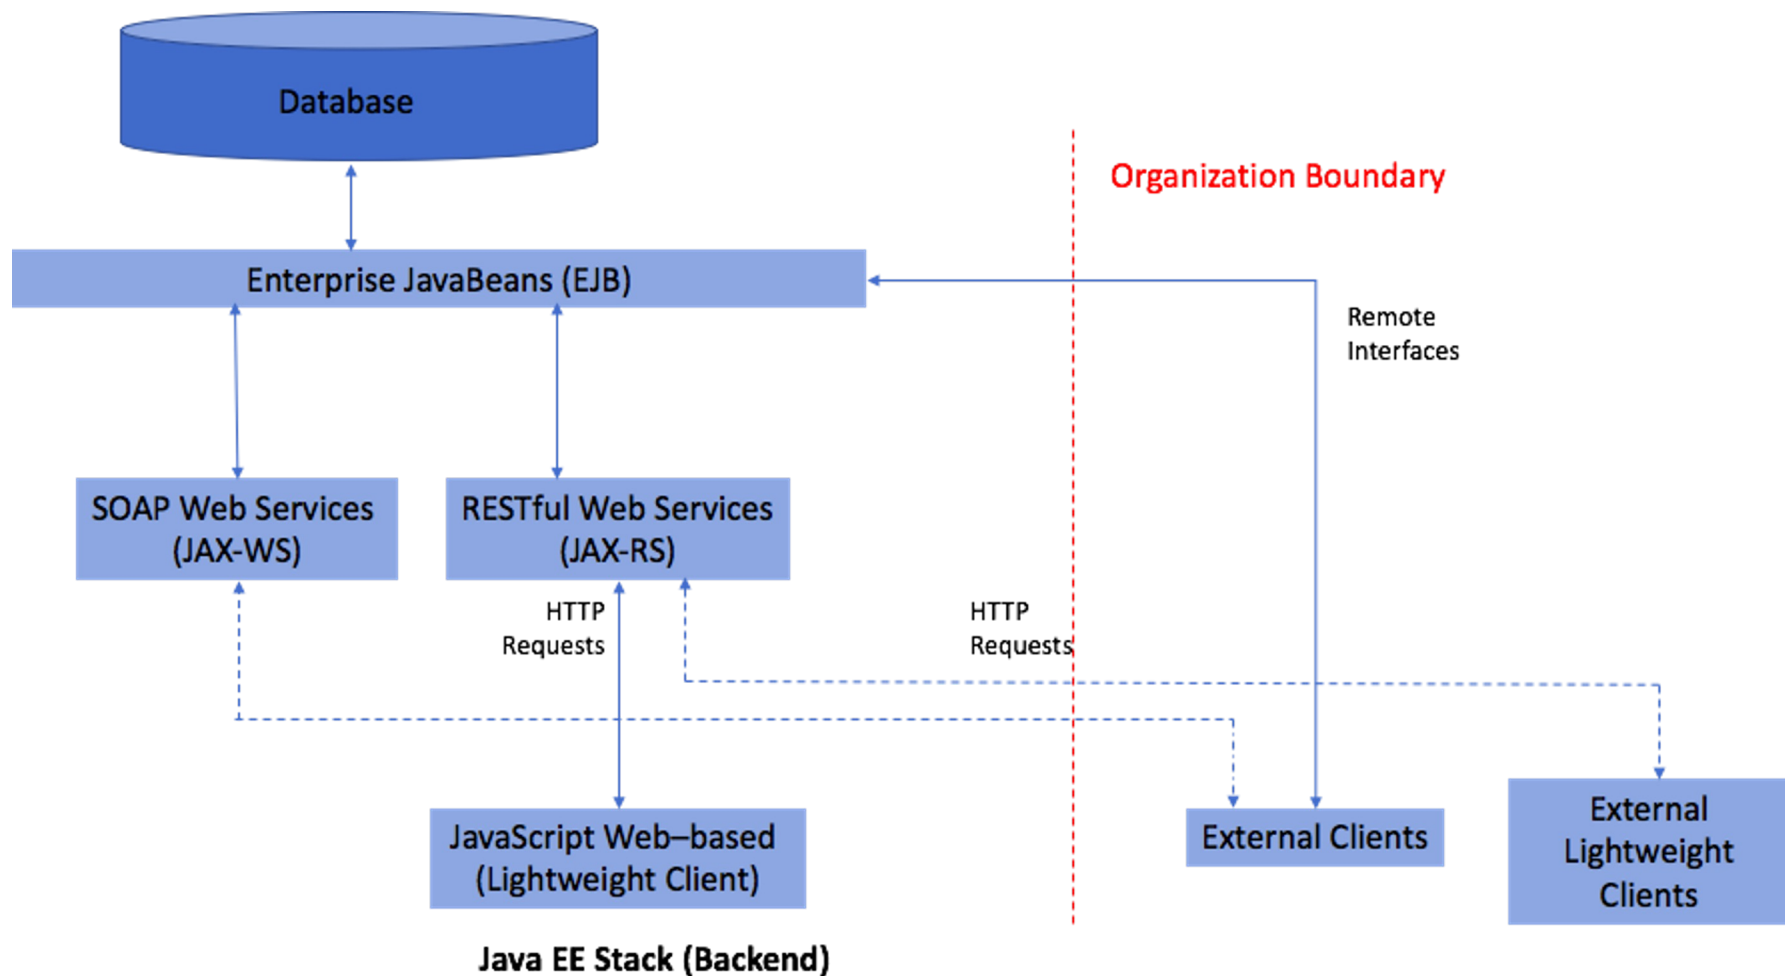

Hardware - SMART Door Lock
